1. Overview

The T*Square T20 Education board is a flexible and universally applicable board for evaluating your own FPGA designs with the Trion family from the manufacturer Efinix Inc. The modules are equipped with either the Trion T20Q100 (with internal SPI flash memory for configuration bitstreams, non-volatile user data and RISC-V application code) or with the Trion T20Q144 plus 16 Mbit external SPI-flash. The board is supplied with power via one of the two USB sockets. To carry out current and voltage measurements, additional jumpers and probe test points are provided on the board, which enable the supply paths to be interrupted or the current to be measured using a multimeter for instance. This makes it easy to determine the power consumption. Furthermore, a FTDI4232 is available as a programming interface, which means that the customer is not obliged to purchase an additional programmer. Nevertheless, the integrated programmer can also be separated and used as a “stand-alone”, for example to program other boards, provide a UART or to operate GPIOs. The individual functional blocks are shown in the block diagram below:

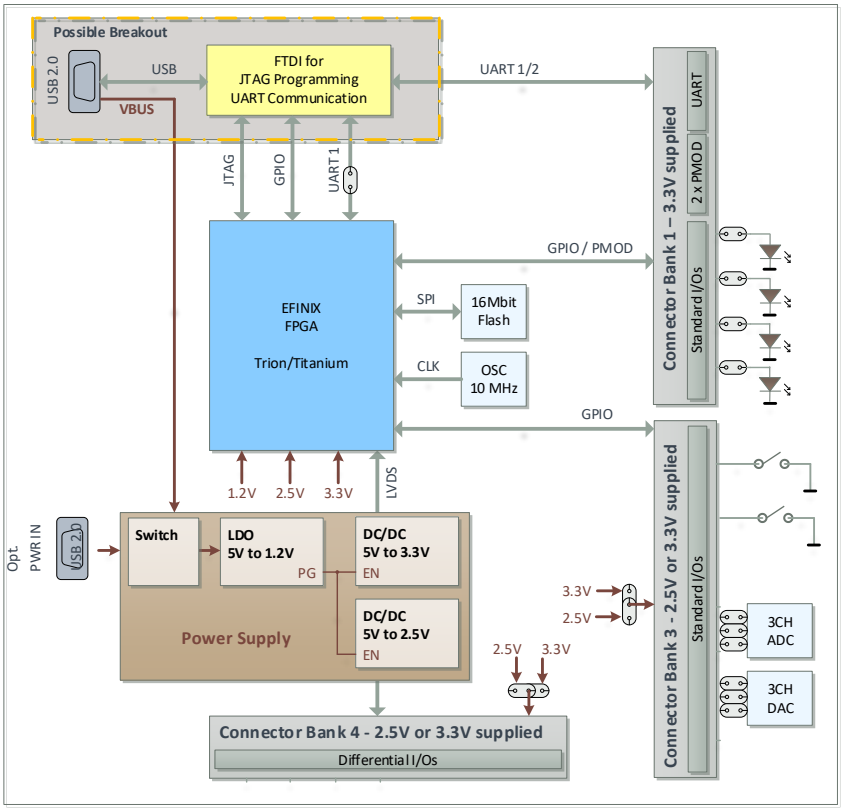

Figure 1: Overview

2. What's in the box

- T*Square board 120mm x 120mm
- USB cable, length 100 cm
- Pin headers for self-assembly
- Socket headers for self-assembly
- ESD packaging
- 2.56mm Jumpers

3. Downloads

Free Efinity® software is available to operate the board. The Efinity® software provides a complete tool flow from RTL design to bitstream generation, including synthesis, place-and-route, and timing analysis. All other required data is also available as a download.

4. Hardware

The figure below shows the most important connections and controls such as LEDs, buttons, jumpers and pin headers. For detailed information about the individual functions, please regard the schematic documents available at the listed download links and also table 1 listing the pins and jumpers.

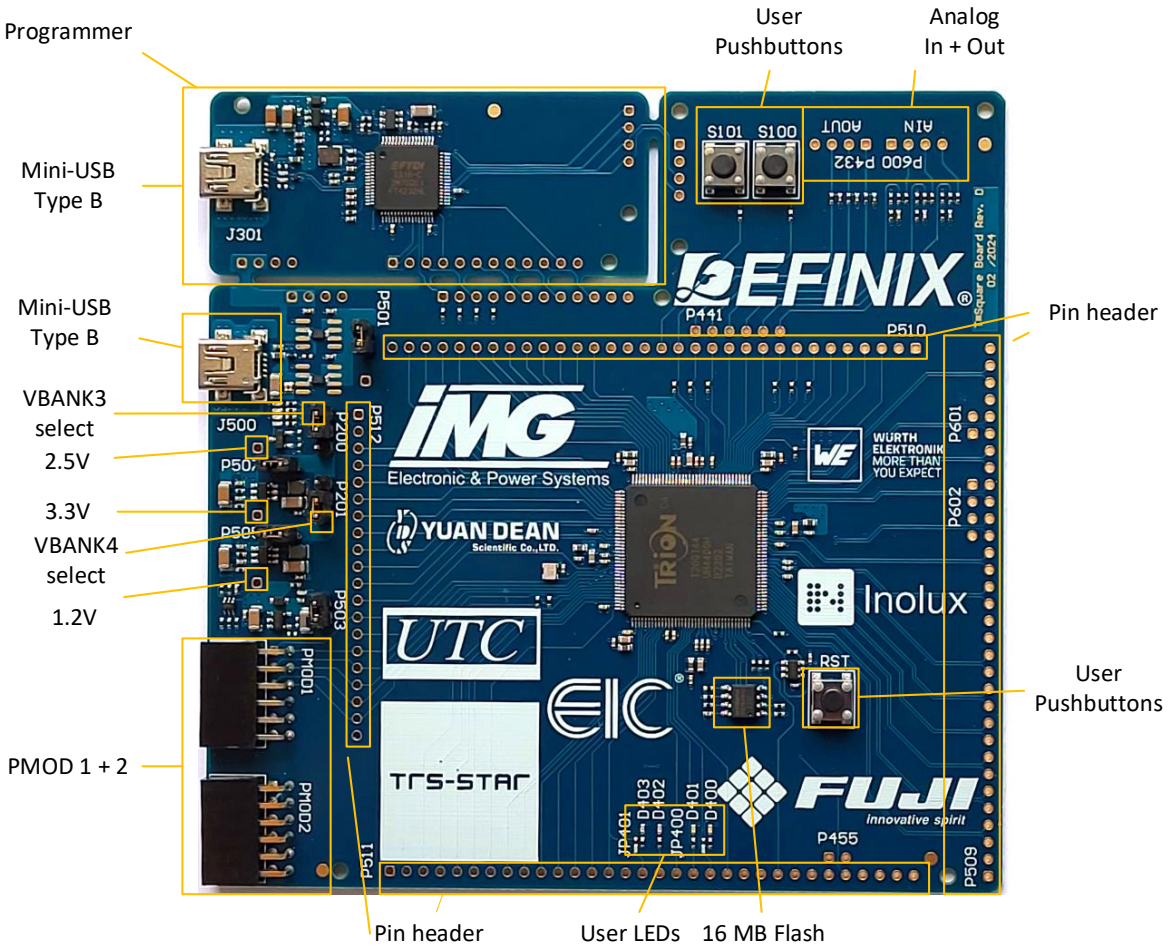

Figure 2: connections and jumpers

Table 1 below shows the user connections and jumpers with their respective functions. For more detailed information, please consult the schematics documents listed under “Downloads”.

Designator	Description
J301	USB port
J500	USB port for power supply, OR'ed with J301 USB power
JP400	Selects the driving pin for LED400
JP401	Selects the driving pin for LED401
P200	Supply voltage selection for Bank 3: 2.5V / 3.3V
P201	Supply voltage selection for Bank 4: 2.5V / 3.3V
P432	3x Analog out 0 … 3.3V
P441	connects the GPIOR 133…149 to the analogue interface
P455	UART
P501	Current tap for 5.0V supply
P503	Current tap for 1.2V supply
P505	Current tap for 3.3V supply
P507	Current tap for 2.5V supply
P509	Pin header bank 4
P510	Pin header bank 3
P511	Pin header bank 1
P512	Pin header bank 3
P600	3x Analog in 0 … 3.3V
P601	connects the GPIOB to the analogue interface
P602	connects the GPIOB to the analogue interface

Table 1: Pins and jumpers

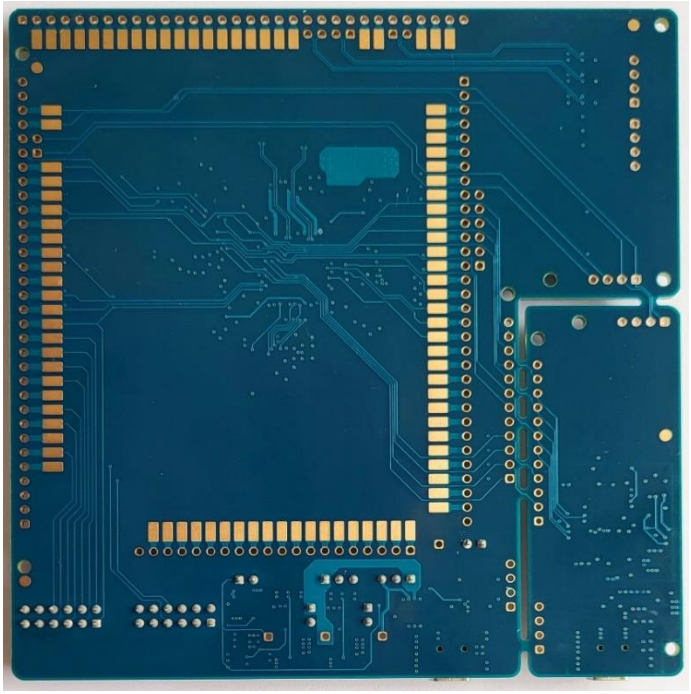

Figure 3: Additional wires and connections can be soldered on the bottom side.

5. Separation of the programming board

The programming board is designed in such way that it optionally can be separated from the FPGA board. It can now be used as a “stand alone” programming board to program other boards with it. To do this, the two outermost break away tabs should be carefully separated using a light-duty flush cutting wire cutter.

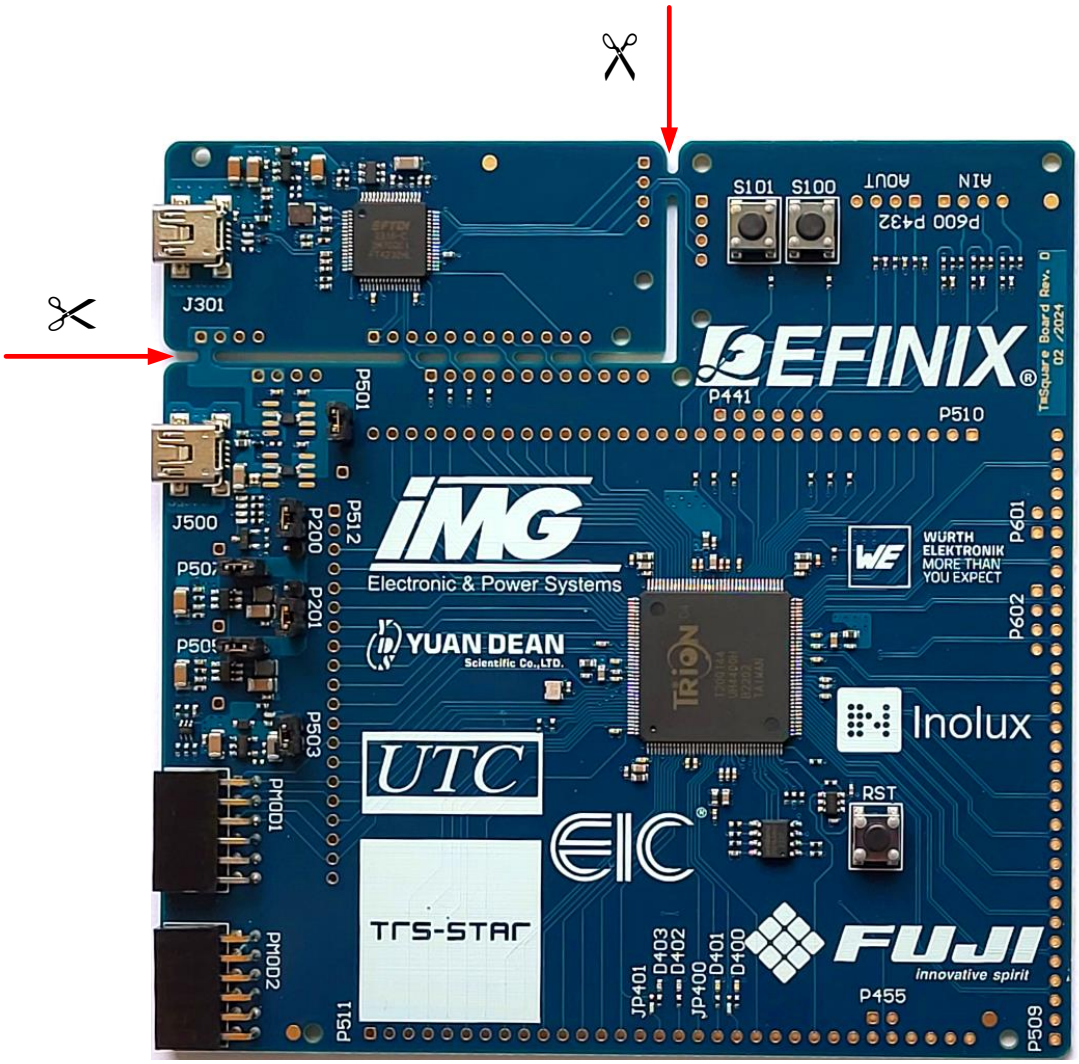

Figure 4: breakout board's cutting scheme

Now the small board can be broken out. If small burrs or frays are visible in the copper after breaking it off, these can be straightened with fine sandpaper to avoid short circuits or cuts. Using the pin and socket headers (not included), the programmer can be plugged back into the FPGA board if necessary. For this purpose, the plugs and sockets must be soldered accordingly by the customer.

6. Software

6.1 Efinity® software

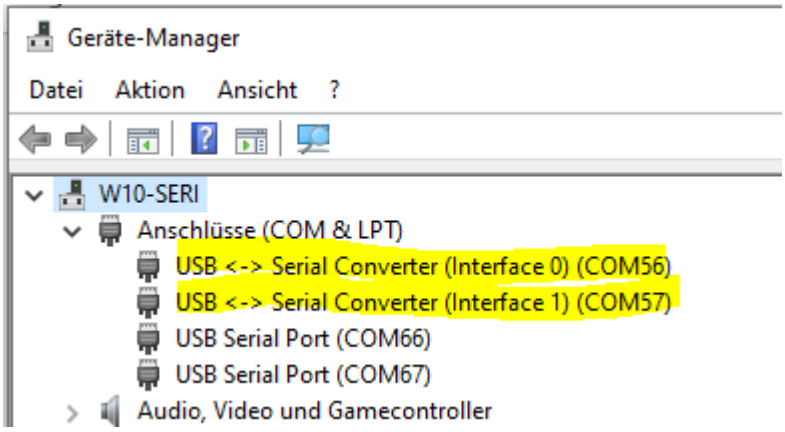
The Efinity® software provides a complete RTL-to-bitstream flow. With a simple, easy to use GUI interface and command-line scripting support, the software provides the tools you need to build designs for Titanium and Trion® FPGAs. The software runs on the Windows, Ubuntu, and CentOS/Red Hat Enterprise operating systems.

For a detailed description of the installation process of the Efinity® software please refer to the Efinity Software Installation User Guide.

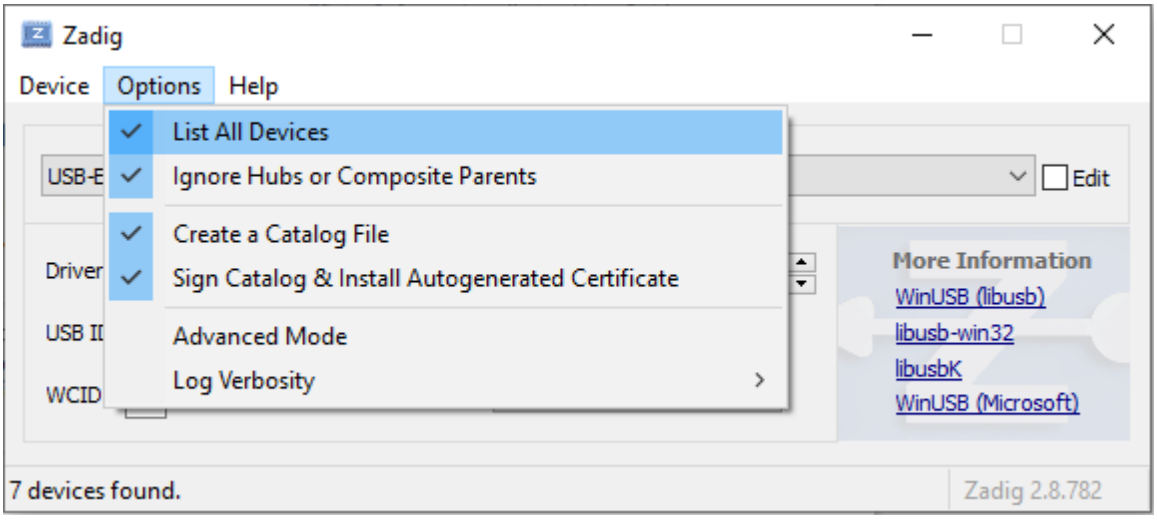
6.2 T*Square T20 Education board specific settings (Microsoft Windows)

Please follow the steps 1 to 7 to install the driver:

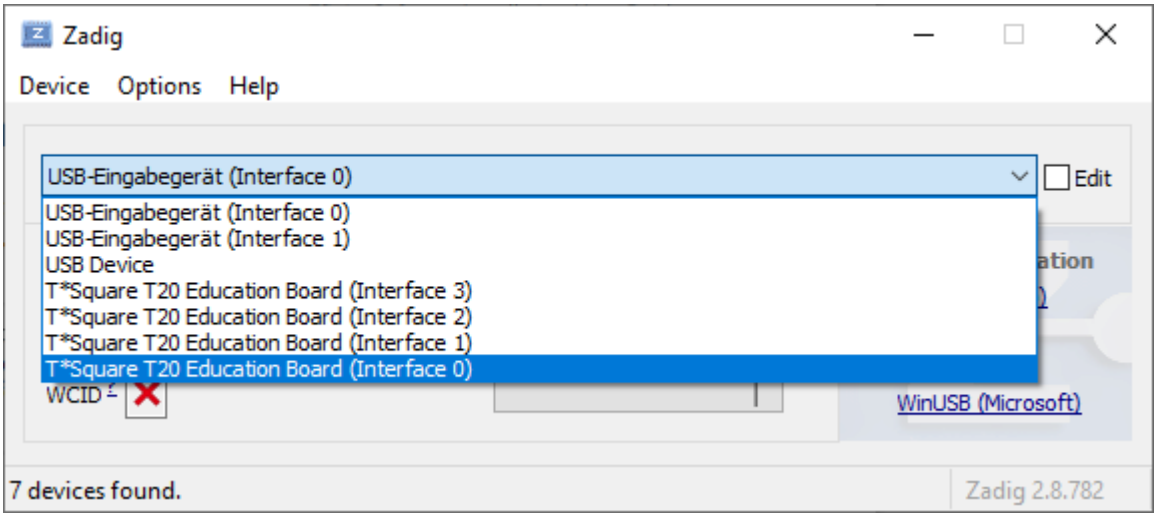
1. Connect the T*Square T20 Education board with the included usb cable with your computer. The board will be powered up immediately.
2. Open the **Device Manager** and verfiy that the **USB <-> Serial Converter (Interface 0** and **1)** are present



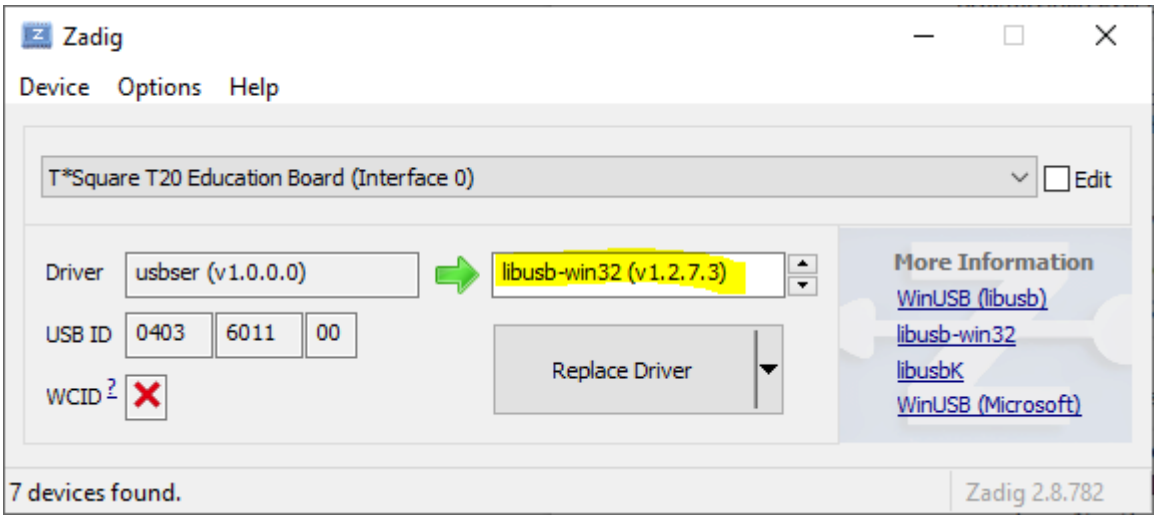
3. Open the Zadig software and select **Options -> List All Devices**



4. Now you can select the entry **T*Square T20 Education Board (Interface 0)**

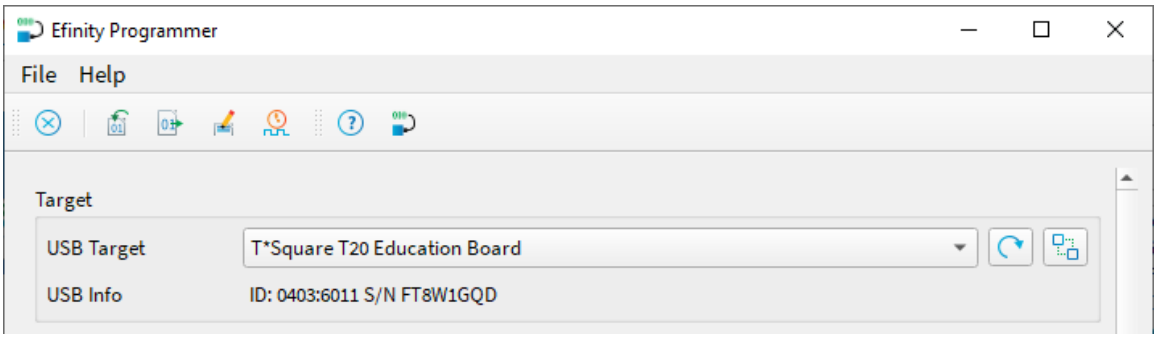


5. Please choose the libusb-win32 driver and push the **Replace Driver** button



6. Repeate step 4 and 5 with **T*Square T20 Education Board (Interface 1)** selected and then close the Zadig software.

7. After powercycling the board (unplug and replug the usb cable) you can program the FPGA with the onboard programmer.



7. Pin headers

7.1.9 Analog in

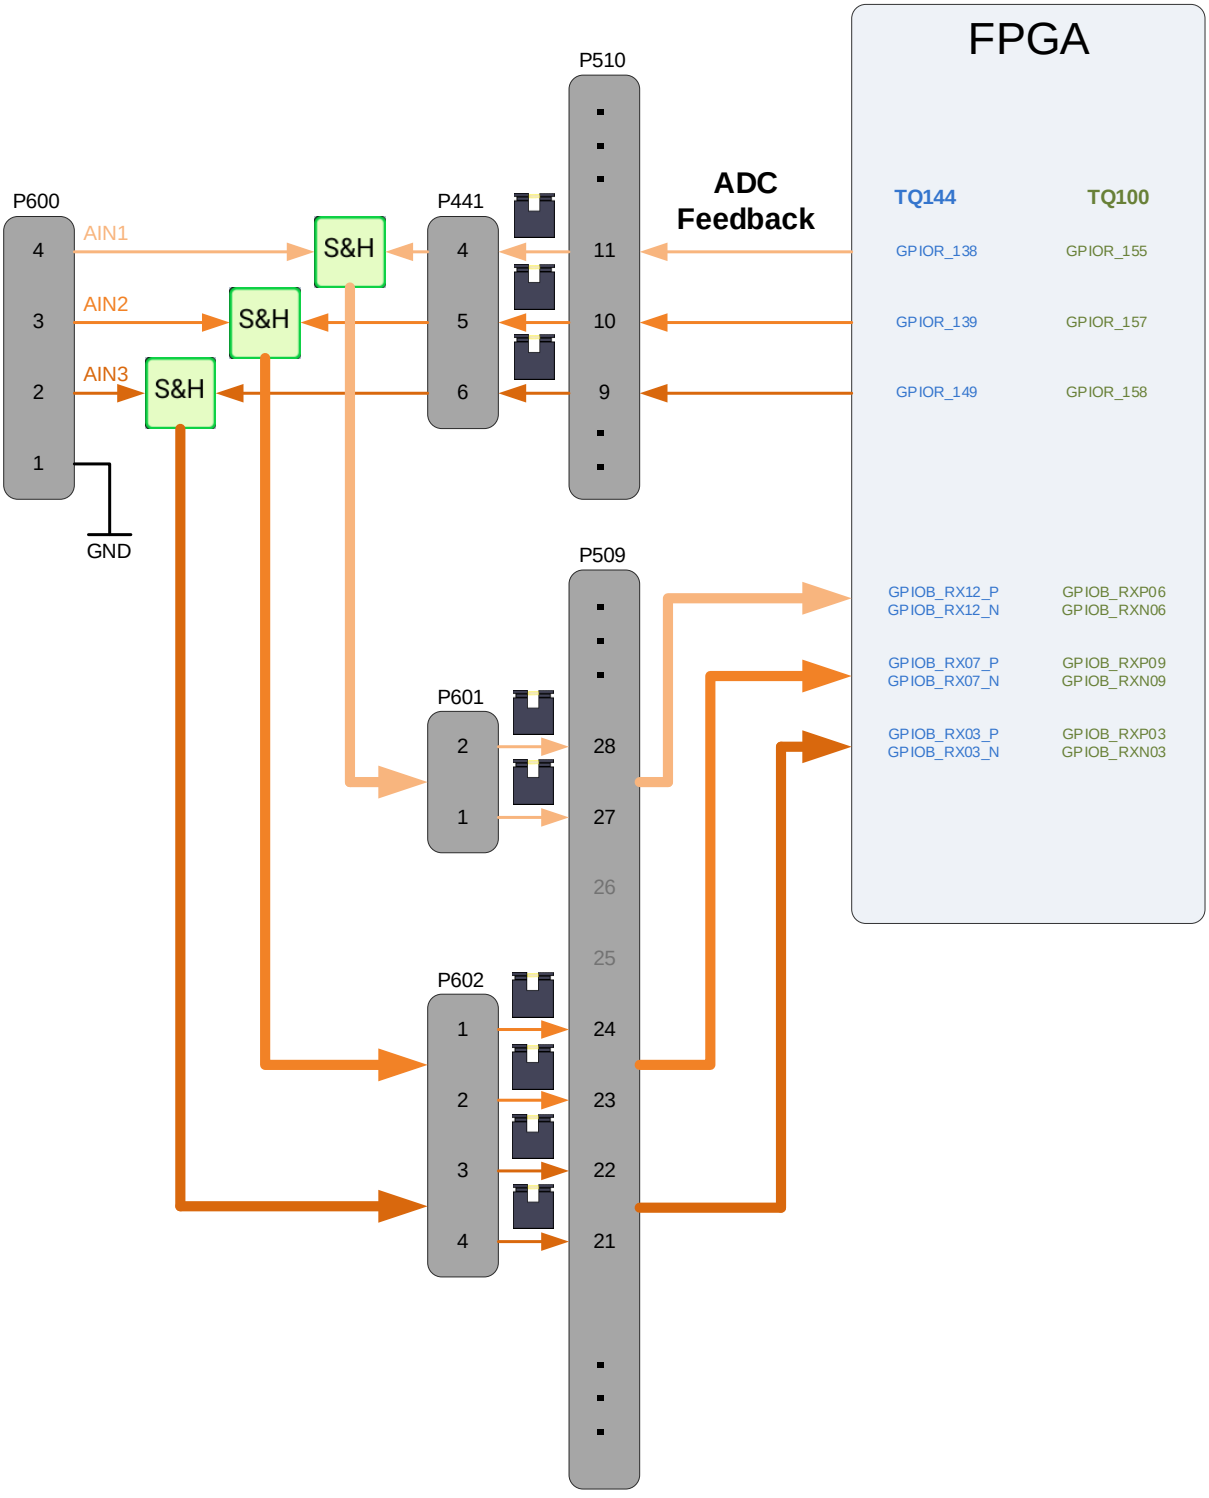

Figure 8: Analog in

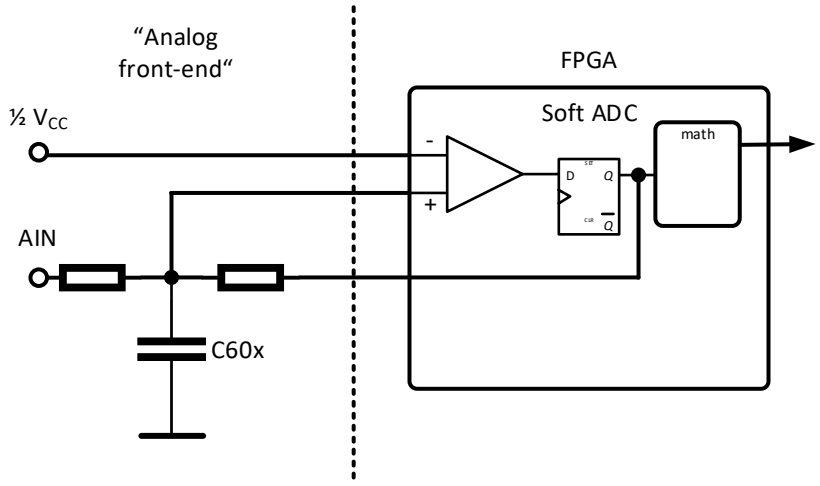
Table 12: Analog in - T20Q144

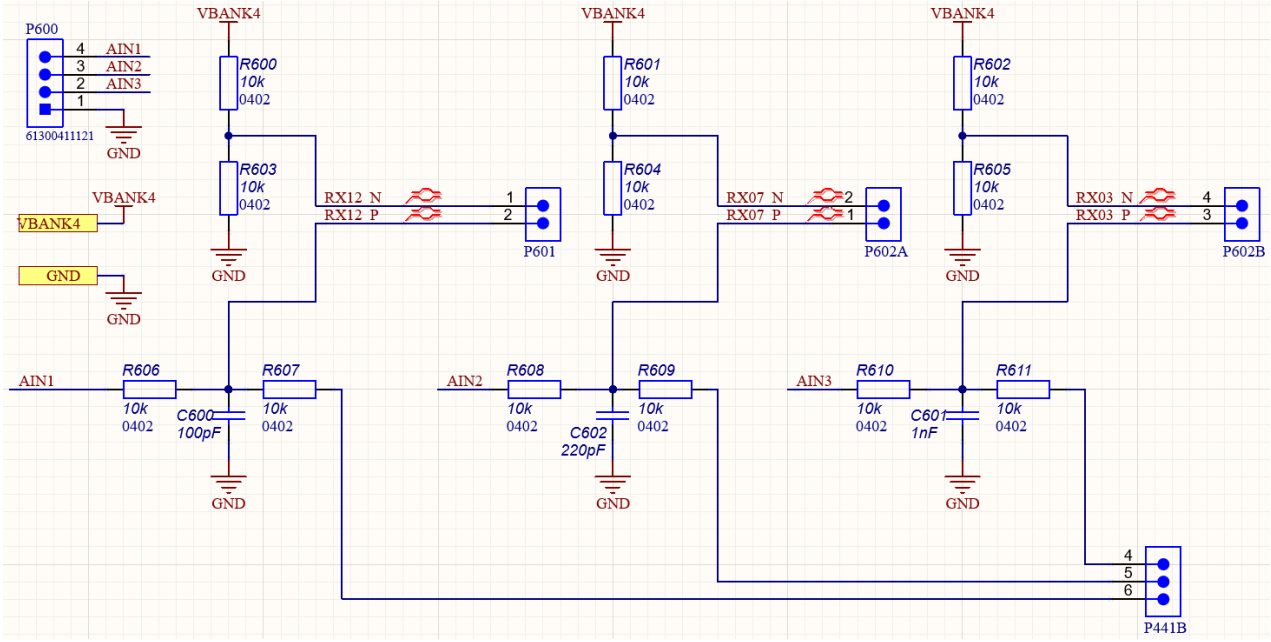
ADC Signal	T20Q144 PIN	Resource TQ144	Signal Schematic	Description / alternative use	Bank
AIN1	82	GPIOR_138	GPIOR_138	ADC Feedback out via P510-P11	3E
AIN1_P	70	GPIOB_RX12_P	GPIOB_RX12_P	Positive LVDS input via P509-P28	4A
AIN1_N	69	GPIOB_RX12_N	GPIOB_RX12_N	Negative LVDS input via P509-P27	4A
AIN2	81	GPIOR_139	GPIOR_139	ADC Feedback out via P510-P10	3E
AIN2_P	66	GPIOB_RX07_P	GPIOB_RX07_P	Positive LVDS input via P509-P24	4A
AIN2_N	65	GPIOB_RX07_N	GPIOB_RX07_N	Negative LVDS input via P509-P23	4A
AIN3	80	GPIOR_149	GPIOR_149	ADC Feedback out via P510-P09	3E
AIN3_P	61	GPIOB_RX03_P	GPIOB_RX03_P	Positive LVDS input via P509-P22	4A
AIN3_N	60	GPIOB_RX03_N	GPIOB_RX03_N	Negative LVDS input via P509-P21	4A

In order to use different sampling rates, the filter capacitors of the three analogue inputs are equipped with different values, which result in different cutoff frequencies of the analogue source signal:

- AIN1: C600 = 100pF => f_G= 159,2 kHz
- AIN2: C602 = 220pF => f_G= 72,3 kHz
- AIN3: C601 = 1000pF=> f_G=15,9 kHz



The exact resistance values can be taken from the schematic section below:



If other cut-off frequencies are required, simply use the free filter calculator tool on TRS-Star's webpage:

German: https://www.trs-star.com/service/kalkulatoren/hochpass-und-tiefpassfilter

4	5	GPIOL_31	GPIOL_31	P511 P14	1C

7.2.7 UART

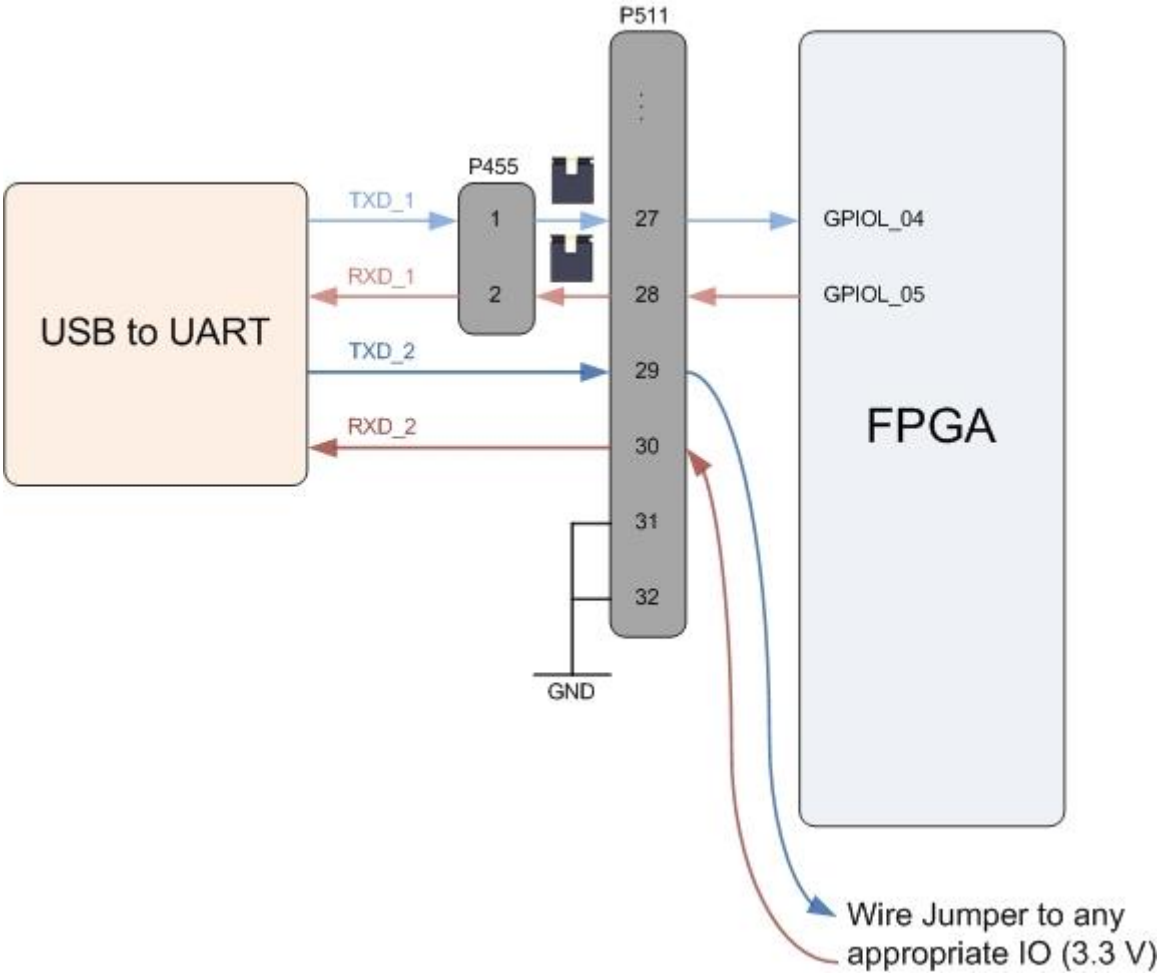

Figure 9: UART - T20Q100

Table 21: UART - T20Q100

Pin	T20Q100 PIN	Resource TQ100	Signal Schematic	alternative use	Bank
TXD_1	23	GPIOL_04	TXD_1	Connect P455-P1 with P511-P27 (GPIOL_04)	1A
RXD_1	22	GPIOL_05	RXD_1	Connect P455-P2 with P511-P28 (GPIOL_05)	1A
TXD_2			TXD_2		
RXD_2			RXD_2		

7.2.8 Analog out

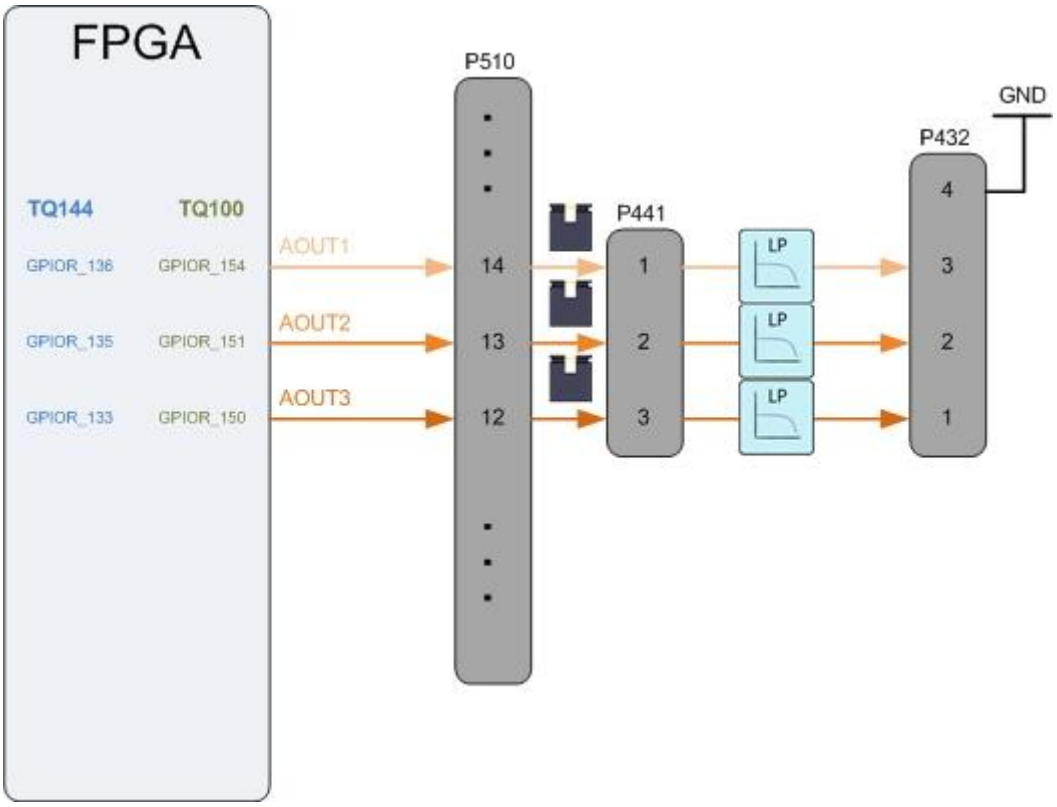

Figure 10: Analog out - T20Q100

Table 22: Analog out - T20Q100

DAC Number	T20Q100 PIN	Resource TQ100	Signal Schematic	alternative use	Bank
1	56	GPIOR_154	GPIOR_136	P510 P12	3D
2	57	GPIOR_151	GPIOR_135	P510 P13	3D
3	58	GPIOR_150	GPIOR_133	P510 P14	3D

7.2.9 Analog in

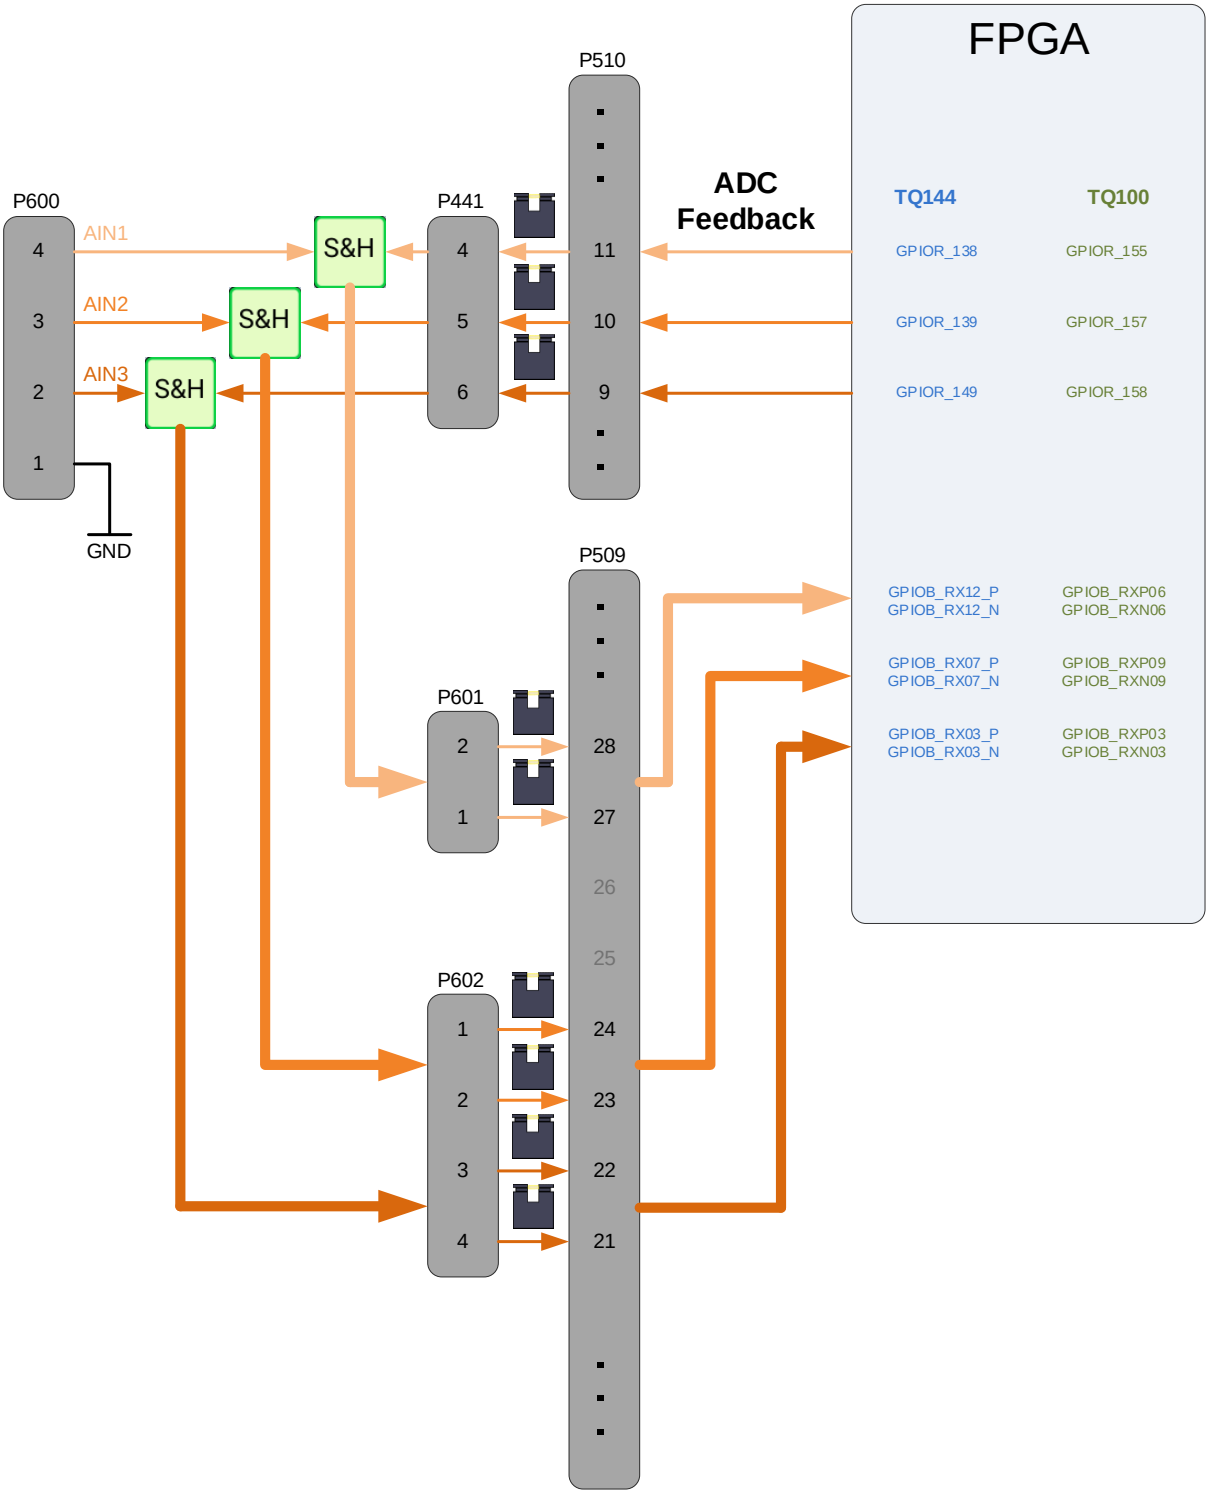

Figure 11: Analog in TQ100/144

Table 23 Analog in - T20Q100

ADC Signal	T20Q100 PIN	Resource TQ100	Signal Schematic	Description / alternative use	Bank
AIN1	55	GPIOR_155	GPIOR_138	ADC Feedback out via P510-P11	3E
AIN1_P	46	GPIOB_RXP06	GPIOB_RX12_P	Positive LVDS input via P509-P28	4A
AIN1_N	47	GPIOB_RXN06	GPIOB_RX12_N	Negative LVDS input via P509-P27	4A
AIN2	54	GPIOR_157	GPIOR_139	ADC Feedback out via P510-P10	3E
AIN2_P	49	GPIOB_RXP09	GPIOB_RX07_P	Positive LVDS input via P509-P24	4A
AIN2_N	48	GPIOB_RXN09	GPIOB_RX07_N	Negative LVDS input via P509-P23	4A
AIN3	53	GPIOR_158	GPIOR_149	ADC Feedback out via P510-P09	3E
AIN3_P	44	GPIOB_RXP03	GPIOB_RX03_P	Positive LVDS input via P509-P22	4A
AIN3_N	43	GPIOB_RXN03	GPIOB_RX03_N	Negative LVDS input via P509-P21	4A
